Versteel Launches Aerie Table Collection

Shaping the future of the resilient office, Versteel's latest collection of tables, Aerie, blends minimalistic elegance with function and power, standing strong as the focal point of any room.

Aerie tables use integrated technology and thoughtful design to promote productivity in a synergetic space with enough room to socially distance due to their expansive size. The tables also integrate centrally located, flush-mounted power bays that provide easy access to functional elements when needed.

Honoring the commercial furniture manufacturer's rich history of collaboration, the Jasper-based company co-designed Aerie with the award-winning, industry-renowned Favaretto and Partners. Inspired by aerodynamics, it offers durability with a lightweight, sophisticated design aesthetic that showcases a unique blend of strength and lightness.

Aerie's sleek, high-end appearance showcases thoughtful design choices including a linear surface detail, contrasting metal colors, striking veneer grain detail, and seamlessly wrapped powder coat tops.

Aerie is available in a range of conference sizes and can be specified with various power and charging options. → [INFO](#)

Samuelson Furniture Reveals "Sound By Samuelson"

Samuelson Furniture, a fourth generation family-owned furniture manufacturer, is excited to announce the launch of Sound by Samuelson, a visionary patent pending product that integrates bluetooth technology into its seating. Sound by Samuelson allows users to be immersed in the comforts of sound with the option to privately enjoy their favorite song, audio book, TV show or game system without the need of turning the volume up to an uncomfortable level for those nearby.

Unlike typical sound systems, Samuelson Furniture does not use commonly-found directional firing speakers, but rather high-grade technology that provides a private and pleasant sound experience by turning the chair itself into the speaker. This system reduces the struggle or strain to hear while simultaneously reducing disturbance to others nearby. The furniture is free of exposed wires, hole cuts for speakers, volume knobs or buttons that are typically found in Bluetooth enabled chairs and are controlled entirely through the user's phone, tablet, or TV.

Sound by Samuelson products can also be utilized for therapeutic or wellness-related purposes. The comfortable seat combined with the enclosed sound system can enhance the experience of music therapy or other applications that might be specific to the needs of an individual.
