

Samuelson Furniture: Seating Integrated with Bluetooth Technology

Sound by Samuelson furniture features integrated patent-pending Bluetooth technology into seating. It allows users to be immersed in the comforts of sound with the option to privately enjoy their favorite song, audio book, TV show or game system without the need of turning the volume up to an uncomfortable level for those nearby. The Bluetooth enabled chairs are controlled entirely through the user's phone, tablet, or TV, eliminating the problem of invasive earbuds without compromising on convenient accessibility.
